Trans. of Khirurgiya (USSR) 1960, v. 36, no. 11,
p. 82-86.

DESCRIPTORS: *Burns, *Therapy, *Traumatic shock.

Experience in treatment of 705 burn patients at the
Vishnevskiy Institute of Surgery is reported. Control
of pain, with concomitant protection of the nervous
system against further stimulation, is basic. Anti-
shock measures are routinely applied in all cases of
burns of second to fourth degree with more than 15% of
the body surface attacked. Combined procaine block
and intravenous infusion of procaine solutions exerts a
positive influence on diuresis. Lung edema is avoided
by limitation of fluid therapy (never more than 3 or 4
(Biological Sciences--Pathology, TT, v. 6, no. 2)(over)
